LISTING OF YELLOWS, BRONZES, ETC.

SEEDLINGS AND FLOWERING PLANTS

#112

We list separately the following yellows, bronzes, creams, etc. While we cannot foretell color in unflowered yellow crosses, we have every reason to believe a good percentage will flower as described.

* * * * *

983-Y	<u>(C. EMPRESS FREDERICK X LC. ORIOLE) X C. DOWIANA</u> All of this cross we have flowered have been yellows and orange shadings with some very fine things included. Good substance and a vigorous grower.	3" \$10.00-12.00 3½" 15.00-18.00
	<u>BLC. MIDENETTE X LC. HAROLDIANA</u> Expect a fall to winter yellow in a large flower.	1 3/4" 3.00-4.00 2 1/2" 8.00 3 " 10.00-12.00 3 1/2" 15.00-18.00
	<u>LC. HANGKOW X BLC. MIDENETTE</u> Good, rich colorings should result from this cross, to flower fall to winter.	1 3/4" 3.00-4.00 2 1/2" 8.00 3 " 10.00-12.00 3 1/2" 15.00-18.00
	<u>BLC. GOLDEN GUINEA X BLC. CONSUL GREIG</u> A good yellow cross with many fine possibilities.	1 3/4" 4.00 2 " 5.00
1451-Y	<u>BLC. ZANTURANO, LABURNUM X LC. ANNE WALKER</u> This combination should result in very good colorings, especially with the fine Anne Walker as a parent.	1 3/4" 4.00 2 " 5.00
	<u>C. BENDER X C. BENDER</u> In our opinion this is more or less a speculative cross - although we would expect some fine things to develop.	1 3/4" 4.00 2 " 5.00
	<u>LC. LUMINOSA AUREA X BLC. MORNING SUN</u> Crossing back on the Luminosa Aurea should result in richer yellows and intensify the colored lip.	1 3/4" 4.00 2 " 5.00
	<u>LC. TENEBROSA X C. DOWIANA (LC. LUMINOSA)</u> Originally made by Charlesworth and flowered in 1901, this cross has been remade a number of times and is always an attraction with its great contrasts between the yellow to orange gold sepals and petals and deep, velvety, rich, crimson lip.	1 3/4" 4.00 2 " 5.00
1447-Y	<u>LC. CORSAIR X BLC. CONSUL GREIG</u> This combination should result in some fine yellows.	1 3/4" 4.00 2 " 5.00
	<u>BLC. MALVERN X C. BOW BELIS</u> Here we expect a range in color from creams through good, rich yellows. Strong growing characteristics.	1 3/4" 4.00 2 " 5.00
1448-Y	<u>BLC. CONSUL GREIG X LC. ANNE WALKER</u> Our expectations for fine results in this cross are very high.	1 3/4" 4.00-5.00
	<u>BLC. CHIEF JOSEPH X LC. SCHROEDERAE</u> We have flowered some of this cross and have been very pleased with results. There is a wide range in sepal and petal colors from light yellows through the rich shadings and into browns and bronzes. Strong growing.	3 " 12.00 3 1/2" 15.00-18.00
	<u>C. ACLANDIAE X C. DOWIANA (C. PRINCESS CLEMENTINE)</u> This cross was originally made by the Laeken Gardens back in 1902. At that time it was considered an interesting variation. Today we do not think of size as a major attribute and do expect some very unusual yellow colorings and combinations from this cross, mainly because of the straw to tan colorings of the Aclandiae and its unusual substance.	1 3/4" 3.00-4.00 2 " 5.00

LISTING OF YELLOWS, BRONZES, ETC.

	<u>C. LEOPOLDI X C. DOWIANA (C. CHAMBERLAINIANA)</u>	1 3/4"	3.00-4.00
	Originated for the first time by Veitch in 1881. C. Leopoldi is considered a variety of C. Guttata and results should be interesting as this parent is so free flowering, making up spikes with as many as 15 flowers each, and of good size with tremendous substance.		
1135	<u>C. GUTTATA X L. TENEBROSA</u>	1 3/4"	3.00-4.00
	We feel this cross will be spectacular from a stand-point of floriferousness, substance and colorings - expect medium size flowers with Guttata influence predominating and good growing qualities.	2 "	5.00
		2 1/2"	6.00-8.00
		3 "	10.00-12.00
1132	<u>C. BARBARA BILLINGSLEY X L. HARPONYLLA</u>	1 3/4"	3.00
	As far as we have been able to ascertain, L. Harpophylla has never been crossed on a breeding white before. This cross should result in some very beautiful forms of small flowers in the orange range shadings and more or less upright spray type flower spikes as in Harpophylla, with its free flowering tendencies. Great potentials for continued breeding. Winter and Spring.	2 "	4.00-5.00
1133	<u>C. BARBARA BILLINGSLEY X L. CINNABARINA</u>	1 3/4"	3.00
	As in 1132 we find no records where Cinnabarina has been used with a breeding white cattleya. Color range and flowering characteristics will be similar to the Harpophylla cross. Again great breeding possibilities and wonderful exhibition material should be had. Winter and spring.	2 "	4.00-5.00
	<u>L. PURPURATA X L. XANTHINA</u>	1 3/4"	3.00
	An interesting cross from which we will probably get some yellow to bronze sepal and petal types.		
	<u>BLC. CANARI X LC. ST. GEORGE</u>		4" to larger flower-
	Some very nice yellows have been flowered from this cross.		ing size - 15.00-20.00
	The following five crosses, with one exception, are all made with yellow on one side and a white on the other. The exception, the Blc. Ninon, was made with a yellow and a colored form. All five of these crosses will flower in color from creams through the yellow and bronze range. All are of flowering size.		
	<u>BLC. SAFRAN (BLC. CANARI X C. EDITHAE)</u>		
	<u>BLC. BUTTERFLY (BLC. CANARI X C. MLIE. LA. PAUWELS)</u>		4" to 5" sizes
	<u>BLC. NINON (BLC. CANARI X C. TITRIANAE)</u>		10.00 to 15.00
	<u>BLC. PELICAN (BLC. CANARI X C. PERCIVALIANA ALBA)</u>		
	<u>BLC. ERMINIE (BLC. AUREA X C. AMABILIS ALBA)</u>		

All plants are shipped f.o.b. Summit, N. J. Terms are cash with order or net 30 days when credit is established.
